Novel el MPT51 peptide having i preparing anti-tubercle immune act e bacillus activity vaccine. with respect ç н cell, useful

Example ۲, Ħ ĕ 4 gpp;

for preparing a vaca sequence represents invention comprises the amino acid sequence of Mycobacterium tuberculosis MPB51 protein. The preparing a vaccine against tuberculosis. The uence represents the Mycobacterium tuberculosis. of a C-terminal region of he MPB51 peptide is useful he present amino acid sis MPB51 protein.

The composition of the invention contains a peptide from the M. tuberculosis GICB protein. The antigenic composition of the invention is useful for the early detection of, or immunising a subject against M. tuberculosis disease or infection. The present amino acid sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
      The sequences given in AAB47555-57 show the protein subunits of the M. tuberculosis antigen 85 complex, Ag85A, Ag85B and Ag85C. Peptides of the invention derived from Ag85 can be recognized by a CD8 T-cell and may be used in the manufacture of agent for vaccinating prophylactically or therapeutically against infection by a mycobacterium by stimulating a CD8 T cell response. These peptides bind very strongly to HLA-B3501. Some of these peptides were able to induce cell mediated cytotoxicity using peptide-pulsed macrophages, and Ag85C(204-212) caused CD8 T cells to kill M. tuberculosis infected macrophages and induced intracellular IFN-gamma in activated CD8 cells. Ag85 derived polypeptides are useful for vaccinating a pre-selected host to stimulate a CD8 T cell response against a Mycobacterial infection. They are also useful for detecting in a population of T cells the presence or absence of CD8 T cells that

Vaccine for boosting immunity to mycobacteria when administered in midlife in a subject who has been vaccinated in childhood with Bacillus Calmette-Guerrin, has purified proteins from mycobacterium tuberculosis
                                                                                                                                                                   tuberculogia

Claim 8; Page 17; 61pp; English

strain H37Rv gene Rv0129c product, designated FbpC2 Ag85C. This is one of 31 immunodominant secreted or cytosolic Mtb proteins of strain H37Rv (see AAM50729-59) discovered through the use of 2-dimensional liquid phase electrophoresis coupled with an in vitro interferon-gamma assay and liquid chromatography-mass spectrometry. The immunogens stimulate a strong interferon-gamma response from T cells of M. tuberculosis infected mice. The invention provides vaccine compositions for boosting immunity to mycobacteria when administered in mid-life to a subject who has been vaccinated neonatally or in early childhood with BCG and in whom protective immunity has waned. The vaccine compositions comprise 1 or more of the 31 purified immunogenic proteins. When used as immunogens, the secreted Mtb proteins lack the secreted signal sequence. A preferred protein is Ag85A (see AAM50759), the secreted product of the Rv3084v gene Sequence 340 present sequence Š is that of the Mycobacterium tuberculosis (Mtb)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence given is 85-C from Mycobacterium tuberculosis. The 85-C was amplified from genomic DNA using the primer sequences given in AAQ27373-4. The 85-C gene was sequence and the and the actid sequence determined. Various peptide motifs were identified and could then be in the production of vaccines for immunisation against tuberculosis. peptides may be used to raise antisera or antibodies against
Mycobacterium vaccae protein; antigen; T cell activation; cytokine; dendritic cell maturation; infectious disease; immune disorder; can respiratory system; mycobacterial infection; allergy; tuberculosis; leprosy; sarcoidosis; lung cancer; asthma; skin disorder; psoriasis

sequences encoding the proteins can be used for the treatment, prevention, and detection of disorders including infectious diseases, immune disorders and cancer. In particular, the compounds and methods used for treatment of diseases of the respiratory system, such as mycobacterial infections, asthma, allergies, tuberculosis, leprosy, psoriasis, atopic dermatitis, eczema, allergic contact dermatitis, elematitis, estantial carcinoma, squamous ce allopecia areata, and skin cancers such as basal carcinoma, squamous ce M. vaccae proteins. The M. vaccae proteins may be employed to activate T cells and natural killer cells, to stimulate the production of cytokines, to enhance the expression of co-stimulatory molecules on dendritic cells and monocytes, and to enhance dendritic cell maturation and function. The proteins can be expressed by standard recombinant methodology. Pharmaceutical compositions comprising the proteins or nucleic acid sequences encoding the proteins can be used for the treatment, carcinoma and melanoma invention provides heat-killed Mycobacterium vaccae, Š 34.6%; Score 561.5; DB 2 Pred. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

32K antigen fbpA precursor - Mycobacterium tuberculosis (strain H37RV)
N;Alternate names: 30K native antigen; major protein antigen MPT45
C;Species: Mycobacterium tuberculosis
C;Date: 17-Jul-1998 #sequence\_revision 17-Jul-1998 #text\_change 09-Jul-2004
C;Accession: H70887; A37024; C60274; A54318

Immun. 65:3680-3685(1997).

PUNCTION: Proteins of the antigen 85 complex are responsible for the high affinity of mycobacteria to fibronectin. Possesses a mycolyltransferase activity required for the biogenesis of trehalose dimycolate (cord factor), a dominant structure neces for mainteaining cell wall integrity (By similarity).

SUBCELLULAR LOCATION: Secreted.

SUBCELLULAR EDONGS to the mycobacterial A85 antigen family.
                                                                                                                                                                                                                                                                                                                                                            052972; 49-326.

Parkhill J., Barrell B.G., Cole S.T., Gordon S.V., Hewinson R.G.; "The complete genome sequence of Mycobacterium bovis."; Proc. Natl. Acad. Sci. U.S.A. 100:7877-7882(2003).

-- FUNCTION: Proteins of the antigen 85 complex are responsible the high affinity of mycobacteria to fibronectin. Possesses a mycolyltransferase activity required for the biogenesis of trehalose dimycolate (cord factor), a dominant structure nece for maintaining cell wall integrity (By similarity).

-- SUNCELLULAR LOCATION: Secreted (By similarity).

-- I. SIMILARITY: Belongs to the mycobacterial A85 antigen family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              use

Nat. Struct. Biol. 7:141-146 (2000).
-I- FUNCTION: Proteins of the antigen 85 complex are responsible the high affinity of mycobacteria to fibronectin. Possesses a mycolyltransferase activity required for the biogenesis of trehalose dimycolate (cord factor), a dominant structure nece for maintaining cell wall integrity.
-I- SUBCELLULAR LOCATION: Secreted.
-I- SIMILARITY: Belongs to the mycobacterial A85 antigen family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              coding f

Nature 409:1007-1011 (2001).

-i-FUNCTION: Proteins of the antigen 85 complex are responsible the high affinity of mycobacteria to fibronectin. Possesses a mycolyltransferase activity required for the biogenesis of trehalose dimycolate (cord factor), a dominant structure nece for maintaining cell wall integrity (By similarity).

-i-SUNCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-FEB-1994 (Rel. 28, Created)

FUNCTION: Proteins of the antigen 85 complex are responsible the high affinity of mycobacteria to fibronectin. Possesses a mycolyltransferase activity required for the biogenesis of trehalose dimycolate (cord factor), a dominant structure neces for maintaining cell wall integrity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                86
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SUBCELLULAR LOCATION: Secreted.

                                                                                                                                          FUNCTION: Proteins of the antigen 85 complex are responsible the high affinity of mycobacteria to fibronectin. Possesses mycolyltransferase activity required for the biogenesis of trehalose dimycolate (cord factor), a dominant structure nector maintaining cell wall integrity.

SUBCELLULAR LOCATION: Secreted.
PTM: Contains one disulfide bridge.

SIMILARITY: Belongs to the mycobacterial A85 antigen family.
                                                                                                                Swiss-Prot
